COMFORT FOR THE  
PLANET & PEOPLE

# NATURAL COMFORT

## Over 35 years of expertise in heat pumps.

Clivet has been leading the way in heat pump innovation since 1989. We were among the first to recognize the technology's potential for efficient and sustainable comfort — and our dedication to innovation hasn't wavered since.

## Purpose-built solutions.

Clivet engineers its solutions from the ground up to offer specialized systems designed for a diverse range of applications and environments. Boasting the widest range of heat-pump solutions, our flexible, adaptable approach ensures a perfect fit for your specific requirements.

## Crafted in Europe, made for North America.

As a pioneer in heat pump technology in Europe, Clivet delivers innovative solutions tailored to diverse market needs worldwide. Our products are specifically designed to meet the comfort demands of the North American market, built on four key pillars: dedicated product development, industry-leading manufacturing and quality excellence, and the strength of our partners' premium pre and post-sales service network.

## A simplified product experience.

Clivet systems streamline every step, from simplified design and installation to effortless operation and control. Engineered for efficiency from the ground up, Clivet delivers unparalleled ease of use, lower operating costs, and a lasting commitment to sustainability.

# Clivet Principles

## CLIVET PRINCIPLES

All Clivet systems are based on six key principles that make Clivet's products and systems unique.

These principles are the basis for making application-specific systems, which have always been part of Clivet's DNA.

The six key principles are the foundation of Clivet's entire outlook, and they are the driving force behind Clivet's development of sustainable systems of the future.

# Heat Pump Technology

Heat pumps are the technology of the future because they are significantly more efficient than traditional combustion systems:

- ✓ **Reductions of 50% in Primary Energy, CO<sub>2</sub> and Running Costs**
- ✓ **Extensive use of Renewable Energy**

Due to Clivet's heat pump technology, Clivet's systems guarantee:

- ✓ A single system for both heating and cooling
- ✓ Controlled mechanical ventilation with innovative thermodynamic recovery
- ✓ Free production of domestic hot water in summer
- ✓ Simultaneous heating and cooling to fulfill simultaneous loads

## Importance of Air Renewal

The quality of air inside modern airtight buildings is undermined by a number of pollutants.

A controlled mechanical ventilation system is essential to creating a more liveable environment.

**Clivet's stand-alone system with thermodynamic energy recovery dedicated to ventilation has the following benefits:**

- ✓ Recovers energy both in winter and in summer
- ✓ Reduces the load of outdoor air with a more efficient system and provides more energy for interior rooms
- ✓ Reduces the capacity of the main generators by limiting their operation to seasonal peaks
- ✓ Dehumidifies in summer

## High Seasonal Efficiency

ZEPHIR<sup>3</sup>, Office Building in London, case study

Every application has different needs which vary depending on multiple factors, including different indoor and outdoor climatic conditions, crowding and thermal loads.

**Clivet systems are designed to meet the specific needs of every application, thereby optimizing the use of the system's resources to reach top seasonal efficiency levels thanks to:**

- ✓ One systemic solution
- ✓ Use of the most favourable resources
- ✓ Full control over the system
- ✓ Continuous capacity modulation

# Polyvalent

**Clivet's multifunction systems include all the elements to ensure year-round comfort.** Clivet has developed complete dedicated systems that use the following functions to provide a tailored and specialized solution for each individual application:

- ✓ Heating
- ✓ Cooling
- ✓ Domestic hot water
- ✓ Air renewal and purification
- ✓ Dehumidification

# Decentralization

In developing Clivet products and systems, great attention was given to how to rationalize each choice in terms of design and construction, which could affect the system's running costs and environmental impact for its entire life cycle.

**Many years ago, Clivet successfully developed the principle of generating energy as close as possible to where it needs to be used:**

- ✓ Modular systems that are active only where and when required
- ✓ Reduction or complete elimination of auxiliary consumption (for instance, pumping energy)
- ✓ Stand-alone system
- ✓ Easy to maintain and handle
- ✓ Adapts to the needs of the system

# Integrated Systems

Clivet designs its systems by integrating all the services required for each application.

**The system's elements, optimized and industrially processed to work together, guarantee the highest efficiency and reliability.**

- ✓ Simplified design and installation
- ✓ Lower investment costs
- ✓ Quality of the systems
- ✓ Guaranteed performance

# Digital Solutions

In residential, commercial and industrial buildings, the air conditioning system is the main source of energy consumption, accounting for almost half of the building's total consumption. There is an increasing need for an energy transition as the effect of climate change is growing.

Clivet has decided to play a key role by designing and promoting new technological solutions to improve the efficiency of buildings and significantly reduce its carbon footprint for increasingly sustainable installations.

## Optimization system for the commercial and industrial sector

Optimizing the operation of HVAC systems allows the efficiency of commercial and industrial plants to be maximized in various working conditions, guaranteeing the reduction of energy consumption and ensuring continuity of operation in the production and distribution of thermo-cooling energy.

Clivet's **INTELLIPLANT** solution manages all the elements of medium and large hydronic systems, guaranteeing the best operating conditions for the lowest possible energy consumption.

Developed entirely by Clivet specialists, INTELLIPLANT makes it possible to achieve the maximum efficiency of the system and the units it interfaces with, thanks to algorithms derived from Clivet know-how that make better use of the machine control logics than the most common generalist solutions on the market.

# SHEEN NA

## Reversible heat pump

Air cooled

Inverter Technology

Outdoor installation

**Capacity 20 TON**

**WiSAN-YSE1 NA**

**30.2**

- ✓ **Reversible Heat Pump Technology.** Capable of producing hot or cold water based on the season.
- ✓ **High Reliability Design.** Inverter Scroll compressor ensures efficient and reliable operation. DC Inverter fans offer superior airflow and energy efficiency. Two independent circuits provide redundancy and enhanced reliability.
- ✓ **Highly Sustainable Ecological Refrigerant.** R32 with a Global Warming Potential of 675, reducing environmental impact.
- ✓ **Industry-Leading Efficiency.** Full inverter scroll technology guarantees performance at full and partial load to adapt to the needs of the plant. IPLV (Integrated Part Load Value) up to 20.1, maximizing seasonal performance.
- ✓ **Ultra-Quiet Operation.** Our super-silenced version reduces noise levels, ensuring a quieter environment. Configurable sound emissions reduce the fans speed.
- ✓ **Wide Operating Envelope.** Delivers outlet water temperatures up to 149°F and operates in outdoor temperatures as low as -22°F.
- ✓ **Faster, More Efficient Defrosting.** A special hydrophilic coil treatment shortens defrost cycles, ensuring uninterrupted performance and efficiency.
- ✓ **System scalability up to 160 Tons.** Modular operation up to 8 units in a cascade setup.

## MODULAR UNIT

### Reversible heat pump

Air cooled

Inverter Technology

Outdoor installation

**Capacity 28.2 TON**

**WiSAN-YMD1 NA**

**40.2**

- ✓ **Reversible Heat Pump Technology.** Capable of producing hot/cold water to satisfy the needs of residential and commercial buildings.
- ✓ **High Reliability Design.** Inverter Scroll compressor ensures efficient and reliable operation. DC Inverter fans offer superior airflow and energy efficiency. Two independent circuits provide redundancy and enhanced reliability.
- ✓ **Highly Sustainable Ecological Refrigerant.** R32 with a Global Warming Potential of 675, reducing environmental impact.
- ✓ **Industry-Leading Efficiency.** Full inverter scroll technology guarantees performance at full and partial load to adapt to the needs of the plant. IPLV (Integrated Part Load Value) up to 18.5, maximizing seasonal performance.
- ✓ **Wide Operating Envelope.** Delivers outlet water temperatures up to 140°F and operates in outdoor temperatures as low as -14°F.
- ✓ **High Modularity.** Possibility of coupling up to 16 units in a local network, with 2 groups of 8 units hydraulically connected, designed to minimize the overall footprint.
- ✓ **Plug and Play solution.** Multiple units can be lifted and positioned as pre-assembled skids, easily interconnected on site, minimizing installation time and downtime.
- ✓ **4-pipe configuration.** With the Intelliplant system and the integrated 4-pipes kit, the production of hot and cold water can also be produced simultaneously. The Intelliplant manages the operating mode of each unit according to the cooling/ heating load required by the building.

## Functions and Features

Heat  
pump

Air  
cooled

Outdoor  
installation

R-32

Hermetic  
scroll

Electronic  
expansion  
valve

ECOBREEZE

Full  
inverter

Intelliplant

## Dimensions and Clearances

### CAUTION!

For trouble-free operation of the unit it is essential to maintain the safety distances indicated by the green areas.

Size	▶▶ WiSAN-YMD1 NA	40.2
A - Length	in	88.17
B - Width	in	46.2
C - Height	in	93.2
A1	in	47.99
A2	in	19.69
B1	in	19.69
B2	in	19.69
Operating weight	lbs	1,676

The above mentioned data are referred to standard units for the constructive configurations indicated.

## Versions and Configurations

### SUPPLY VOLTAGE:

**4606H** 460/3/60 Supply voltage (Standard)

### ACOUSTIC CONFIGURATION:

**SC** Acoustic configuration with compressor soundproofing (Standard)

### EXTERNAL SECTION FAN CONSUMPTION REDUCTION:

**VENDC** DC high efficiency fan (Standard)

### WATER FITTINGS USER SIDE EXCHANGER:

**AMOD4MO** Water fittings for modular unit 4 pipes with motorized valves

**AMOD2MO** Water fittings for modular unit 2 pipes with motorized valves

**AMOD2MA** Water fittings for modular unit 2 pipes with manual valves

## Technical Data

SIZE	▶▶ WISAN-YMD1 NA	40.2
Cooling Capacity	(1) ton	28.2
Total power input	(1) kW	36.7
EER	(1) BTU / (Wh)	9.22
IPLV	(1) BTU / (Wh)	18.5
Heating Capacity	(2) MBH	368
Total power input	(2) kW	36.7
COP	(2) kW / kW	2.94
Refrigeration circuits	Nr	2
N° of compressors	Nr	2
Type of compressors	-	INVERTER SCROLL
Refrigerant	-	R-32
Standard power supply	V	460/3~/60
SCCR	kA	65
Sound power level cooling (SC)	(3) dB (A)	87

(1) Data: User side heat exchanger water 54 °F / 44 °F; Outdoor Air 95 °F

(2) Data: User side heat exchanger water 110 °F / 120 °F; Outdoor air 47 °F d.b. / 43 °F w.b.

(3) Sound power calculated on the basis of measurements made in accordance with UNI EN ISO 9614-2

## Accessories

<b>CCCA</b>	Copper / aluminium condenser coil with acrylic lining
<b>CCCA1</b>	Condenser coil with Aluminium Energy Guard DCC treatment
<b>CMSC13X</b>	Serial communication module for Modbus TCP/IP, BACnet IP, BACnet MSTP supervision system
<b>TCDC</b>	Condensate collection pan with electric heater / Drain pan with electrical heater
<b>PGFC</b>	Finned coil protection grill
<b>EWHP</b>	User side water piping antifreeze electric heaters
<b>IFWX</b>	Steel mesh strainer on the water side
<b>AMRX</b>	Rubber anti-vibration mounts

Accessories whose code ends with "X" are supplied separately

# INTELLIPLANT

Optimization system and modular heat pump supervisor

- ✓ **Monitoring and control** of hydronic chiller units, reversible heat pumps and multifunctional units.
- ✓ **Workload distribution:** the heating and cooling load is equally distributed between the various units, making the most of their operation in partial load mode.
- ✓ **Centralized management:** professional multi-site cloud platform for unified and simplified control allows the various systems to be monitored and managed from a single interface.

## System Manager

The INTELLIPLANT system allows you to efficiently and continuously manage the hydronic units on the local operator panel and on the remote interface on a computer, smartphone or tablet. Thanks to the values acquired in real time from the system, advanced control logics enable efficient management of thermal loads based on real system demand, constantly monitoring the system conditions and selecting unit activation, either based on the most performing activation sequence or by balancing the operating hours.

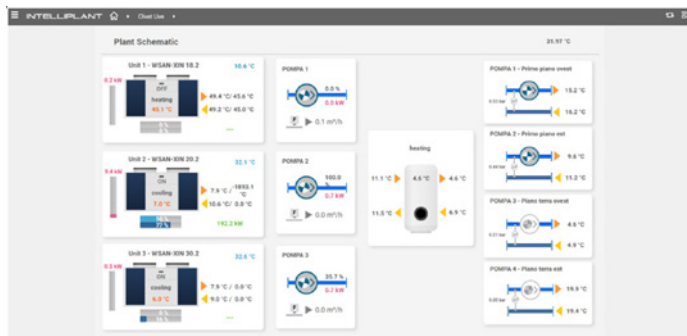

- ✓ Monitoring and control of hydronic chiller units, reversible heat pumps and multifunctional units
- ✓ Primary circuit management of 2-pipe and 4-pipe systems
- ✓ Integration with BMS/BAS through open protocols

## System Type Management

SYSTEM TYPE	UNITS IN-BUILT CONTROL	INTELLIPLANT
2 PIPES (no DHW)	✓	
2 PIPES + DHW		✓
4 PIPES (no DHW)		✓
2 PIPES (no DHW)		✓
2 PIPES + DHW		✓
4 PIPES (no DHW)		✓

## Graphic Interface

### Plant Schematic

The page offers a customized graphic representation where each area can be checked:

- ✓ operation status;
- ✓ real-time values of key operating parameters such as temperature and humidity;
- ✓ presence of alarms that must be promptly reported to the system supervisor/manager.

The user can access detailed parameters specific to the area or individual units.

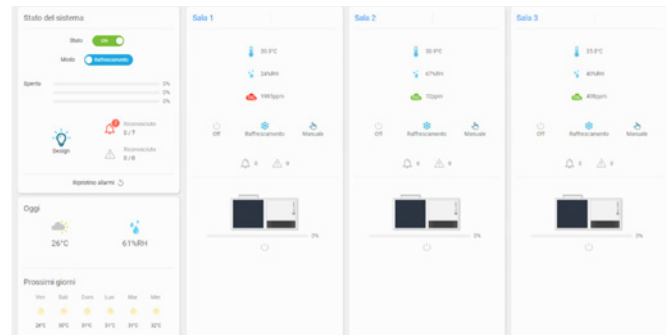

### Unit

The following basic information is displayed for each unit:

- ✓ graphical model of the unit with dynamic representation of the operating state;
- ✓ operating status of the unit and buttons for quick actions;
- ✓ details of component status (fans, compressors, etc.);
- ✓ list of parameters and their values in real time.

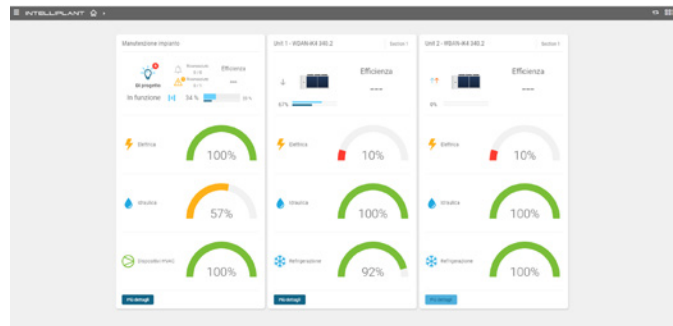

### Plant Dashboard

The main page of the system provides an overview with reports for all areas:

- ✓ system operational status and quick action buttons;
- ✓ percentage and mode of operation of individual units, broken down by areas;
- ✓ maintenance status resulting from the preventive analysis of each individual unit;
- ✓ priority and second-level alarms;
- ✓ current day's weather and forecast for the next 7 days.

### Predictive Maintenance

INTELLIPLANT helps to develop the concept of maintenance from traditional "scheduled routine maintenance" to the more advanced idea of "condition based maintenance", i.e. maintenance customized per event according to its operational status, applicable to the most significant situations affecting refrigeration thermal unit components.

## Notes

For 35 years, we've been  
designing technologies  
that make comfort sustainable  
for people and the planet.
